

NAMEPLATES

Sun Industries Nameplates have superior quality, durability and resistance to harsh conditions. Utilise our versatility of combining adhesives, corners, holes, mounts and more to suit your exact requirements.

**VIN & HIN Plates • Serial Number Plates • Australian Builders Plates • Compliance Plates
Data Plates • Rating Plates • Test Tallies • ID Tags • Asset Tags • Plaques • Badges • Foil Labels**

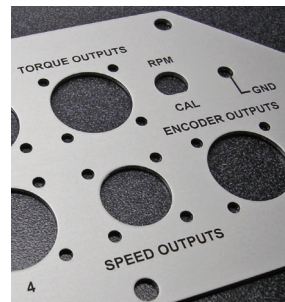

METALPHOTO®

- The most durable solution available for extreme environments. Certified for 20+ years outdoor.
- Photo imaging technology allows a variable image to be embedded into the anodised layer. Combines incredible durability with versatility.

DURABILITY	VERSATILITY	CUSTOM SHAPES	ADHESIVE APPLICATIONS	COST
★★★★★	★★★★★	★★★★	✓	\$\$\$

MATERIAL OPTIONS

Aluminium 0.76mm to 3.175mm

ANODISED & DYED

- An exceptionally hard wearing solution that encapsulates the dye to ensure long term colour fastness.
- Dye is printed into the pores of the aluminium. It is then sealed so the image becomes part of the anodic layer of the aluminium.

DURABILITY	VERSATILITY	CUSTOM SHAPES	ADHESIVE APPLICATIONS	COST

MATERIAL OPTIONS

Aluminium 0.5mm to 1.5mm

LITHOPRINTED

- A perfect solution for medium to harsh environments.
- High quality ink is printed and then oven stoved to bake the ink onto any metal surface.
- An affordable option that provides high durability for most requirements.

DURABILITY	VERSATILITY	CUSTOM SHAPES	ADHESIVE APPLICATIONS	COST

MATERIAL OPTIONS

Aluminium .075mm-2mm | Stainless Steel .5mm-1mm | Brass .5mm-1mm

FOIL

- Thin aluminium to allow for manual marking and fixing to curved surfaces.
- Can be anodised and dyed, or lithoprinted depending on the solution required. A variety of adhesives are used to ensure a long lasting bond.

SPECIALTY DECAL & LABELLING OPTIONS

Take advantage of our technology to create high quality, customised labels and decals with customised information, unlimited colours, names, numbers, logos, barcodes, personalisation and more – all in the same print run.

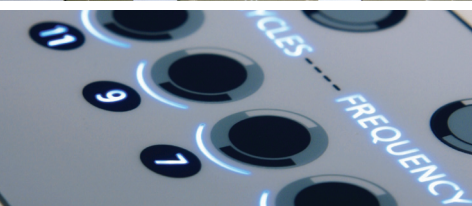

Digital Decals & Variable Data

Our top of the range digital printing equipment provides new design opportunities for industrial labelling with half tones, vignettes, fades and blends now possible and ANY number of colours can be used with little, if any, increase to cost. We can supply complete polycarbonate and polyester subsurface solutions, print on mylar and have a range of varnishes to create even better results.

Decals & Facias

These provide a durable, high quality solution to labelling requirements. Subsurface screen printed with a range of textures and adhesives. Decals and facias are our highest quantity and most popular labelling option.

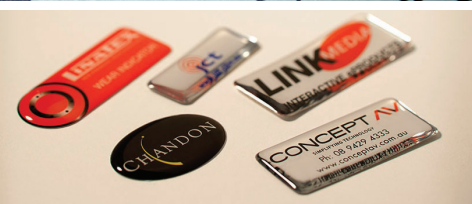

Membrane Switches & Keypads

These are an innovative and low cost "HMI" (Human to Machine Interface) solution to electronic switching requirements. Importantly, it provides both an HMI and a branding solution for your powder coated or injection molded shell as it is a very good opportunity to place professional colours, logos etc on the unit.

Metal Nameplates

An exceptionally durable solution for harsh environments and where serial numbering/etching is required. Sun Industries is the only company in Australia that can supply Anodised/Dyed nameplates as well as Lithoprinted nameplates that can be produced up to 40% cheaper without any loss in quality.

'Flexidome' Resin Badges

Using automotive grade resin, these "3D" domed badges are very attractive and affordable. Our two-part resin is imported from Italy and we use a top end machine for consistency and speed. Beware of cheaper options – single mix resin is not UV stable and becomes hard and discoloured over time.

Dynamic / Variable Data Decals

With unlimited colour and design options, not to mention the range of textures and adhesives, sub-surface printed dynamic decals are the new benchmark for industrial labelling. Without the expense of traditional processes, using the latest technology allows us to incorporate decals with unlimited data variation such as serial numbers, part numbers and barcodes, etc.

Mylars

Typically used for identification of electrical equipment, mylars are surface printed. They provide a strong, long term solution for internal environments.
