

GATGARD® NU-LIFE 600

EXTREME HARDCOAT FILM PROTECTION FOR YOUR POLYCARBONATE SHEETING

A Protective Hardcoated Film that is compatible for your Polycarbonate and Acrylic Windows that can be removed when damaged without leaving any adhesive residue, offering **NU-LIFE** to your glazing.

Outgassing is a characteristic of polycarbonate and most thermoplastic sheeting, and applying any type of adhesive backed tint or film, be it rigid or flexible, has always been problematic, with air and moisture bubbles due to outgassing between the sheeting and the film a regular occurrence. GATGARD® Nu-Life 600 film is the long term solution.

GATGARD® NULIFE 600 Graffiti film is a hardcoated film, offering excellent resistance to abrasion, scratching, gouging, chemicals, solvents and graffiti. This hardcoat technology is similar to traditional hardcoat (AR) polycarbonate or acrylic sheet but with the added benefit of being sacrificial, allowing removability if damaged without leaving any adhesive residue.

When used as the protective layer on a thermoplastic sheet surface, GATGARD® Nu-Life 600 graffiti film eliminates the issue of outgassing and provides a long term, optically clear, film solution for protecting polycarbonate and thermoplastic sheeting. This film technology will extend the life of your polycarbonate, acrylic or other plastic sheet glazing.

Applications

Architectural

School Windows, Hospitals, Mental Health Facilities, Government Buildings, Jails/Prisons, Convenience Stores/Kiosks, Shopping Complex, Banks, etc.

Transportation

Train, bus & tram windows, bus shelters, train & bus stations, ticket booths, mass transit, heavy equipment, mining equipment, forestry machinery, etc.

How to Apply or Replace/Refurbish

~ Nu-Life 600 film can be applied using traditional methods of window film application without the need for any specialized or expensive equipment. Specific installation instructions available on request

~ When film reaches it's end of life, it can be simply removed by lifting off the substrate, with absolutely no adhesive residue left on the substrate, ready for re-application of new layer of Nu-Life 600

Benefits

~ Multi-layered, Heavy Duty construction for extreme protection on polycarbonate, acrylic and other thermoplastic substrates

~ Improved Security by creating a deterrent to forced entry

~ Easily cleaned or removed for Anti Graffiti applications

~ This glazing method provides a cost effective alternative to total glazing replacement
